Summary

Final-year B.Tech Computer Science student (CGPA 9.1/10, graduating 2027) eager to begin a career in technology through Nasdaq's Software Development, AI/ML or Quality Engineering internship. Skilled in Python, SQL and AWS, with strong data structures and algorithms. Built 3 independent projects across financial-market strategy testing, LLM-powered automation and AI agents, including a live app used by 50+ people, with 90%+ test coverage. First-place hackathon winner, comfortable with tight deadlines, and a clear communicator through documentation and peer code reviews.

Education

SR University Warangal, Telangana

Bachelor of Technology in Computer Science | ***CGPA: 9.1 / 10*** *2023 – 2027*

- Relevant Coursework: Data Structures & Algorithms, Software Engineering (Object-Oriented Design), Database Management Systems (DBMS), Machine Learning Fundamentals, Technical Writing & Documentation.

Projects

Adaptive Stock Trading System | *Financial Markets, Automated Testing, Data Quality* 2025

- Implemented 10+ trading strategies as independent modules processing 3+ real-time and historical financial datasets, benchmarked on Sharpe ratio and maximum drawdown.
- Developed automated tests achieving 90%+ coverage and pre-run data-quality checks that detect and reject corrupt inputs before execution, improving experiment reliability.

ReceiptFlow | *LLM Automation, Data Pipeline, Validation Logic* 2026

- Built and shipped a live receipt-processing application used by 50+ people that processes 500+ scanned receipts end to end, integrating the Google Gemini API for OCR-based structured extraction.
- Designed automated validation and error-handling logic that flags inconsistent or incomplete records, cutting manual correction time by 80% while maintaining high throughput.

AI Agent Automation Framework | *Automation, Object-Oriented Design, Reliability Testing* 2024

- Architected 15+ reusable, loosely coupled task-handling modules using object-oriented design principles so new behaviors can be added without modifying existing components.
- Tested and refined 10+ task-routing rules to achieve 99% task completion reliability; documented design decisions and module interfaces for peer review and reuse.

Experience

Google Developers 2024

AI/ML Educational Program – Participant

- Implemented and evaluated 5+ supervised machine learning models, diagnosing data and logic issues to reach 90%+ accuracy.
- Benchmarked experiments using F1-score, ROC-AUC, and precision/recall and participated in structured peer code reviews to improve datasets and model reproducibility.

Achievements

- **First place** in a hackathon at SR University, building and demoing a working solution as a team under a tight deadline.

Technical Skills

Languages & Cloud: Python, SQL, AWS
Problem Solving: Data structures, algorithms, complexity analysis, object-oriented design and programming
AI/ML & Automation: Machine learning models, model evaluation, LLMs, LLM API integration (Google Gemini), AI agents, RAG, embeddings, semantic search, automation
Data & Quality: DBMS fundamentals, schema design, queries, REST APIs, data validation, automated and unit testing (90%+ coverage)
Cloud & Tools: Microsoft Azure, Docker, Git, GitHub, Agile
Domain Interest: Capital and financial markets (strategy benchmarking, Sharpe ratio, max drawdown)

Certifications

• Microsoft Certified – Azure AI Fundamentals • AWS Academy Graduate – Cloud Foundations • Software Engineering Essentials
